

Use Case: Add Member **extends** Manage Member Records

Actors: Operator

Context: The Add Member use case allows an operator to add a member to the ChocAn data system.

Main Success Scenario:

1. The system creates a new unique member number.
2. The terminal will prompt the operator to input new Member information.
 - a. Member name (25 characters)
 - b. Member street address (25 characters)
 - c. Member city (14 characters)
 - d. Member state (2 letter abbreviation)
 - e. Member ZIP code (5 digits)
3. The system records the data.
4. The terminal displays "Member Added."

Extensions:

- 2a. The operator enters invalid information
 - 2a.1. The system informs the operator
 - 2a.2. The use case continues at step 2.
