Use Case: Add Provider **extends** Manage Provider Records

Actors: Operator

Context: The Add Provider use case allows an operator to add a Provider to the ChocAn data system.

Main Success Scenario:

1. The system creates a new unique Provider number.
2. The terminal will prompt the operator to input new Provider information.
    a. Provider name (25 characters)
    b. Provider street address (25 characters)
    c. Provider city (14 characters)
    d. Provider state (2 letter abbreviation)
    e. Provider ZIP code (5 digits)
3. The system records the data.
4. The terminal displays "Provider Added."

Extensions:
2a. The operator enters invalid information
    2a.1. The system informs the operator
    2a.2. The use case continues at step 2.
